

The diagram illustrates an algebraic identity using geometric shapes. On the left, a white square with a black border contains the variable x . This is followed by a plus sign. Next is a vertical rectangle, also with a black border, divided into two equal horizontal sections, each filled with a solid cyan color. This is followed by an equals sign. On the right side of the equals sign is a large square with a black border, composed of four smaller squares arranged in a 2x2 grid. All four of these smaller squares are filled with a light blue color.
